

CSC 254 Project IV

Java Byte Code Generator

Due Date: Monday, November 17th, noon

In this project you will add actions to the C- compiler front end to generate Java byte code.

Look at the file README for detailed directions and hints.

Getting Started

To get the materials for this project just type the following line:

```
cp -r ~cs254/proj4 ~/proj4
```

In this project, you will be using the Byte Code Engineering Library in addition to JFlex and java_cup. It has already been installed in the ~cs254/Java. Documentation is accessible via the class web page.

Submission Instructions

You can turn in your assignment using the TURN_IN script. To use TURN_IN, add the following line to your .login file.

```
alias TURN_IN ~cs254/bin/TURN_IN
```
