Quiz B (take-home) 2017/09/20
CSC 286/486: Computational Complexity Fall 2017
Instructor: Lane A. Hemaspaandra TAs: Ethan Johnson, Shir Maimon, Colin Pronovost

To do this quiz, you must sign up (no later than 5PM on Tuesday, 9/19) for one of the 30-minute slots on the sign-up sheet we will put on the web (and via BB let you, or by the time you get this we may already have let you) know of. (This is called a 9/20 take-home quiz as its period to do it starts on 9/20, but we’ll hand this out in class on Monday 9/18 due to the need to sign up by 4PM Tuesday 9/19.) If every time is impossible for you, you must by 11PM on 9/18 have emailed to csc486staff a list of every time from 8AM to 9PM in the range 315PM-9/20 through 8PM-9/22 at which you DO NOT have a class or workshop or recitation section or religious conflict, and Colin or Ethan will then by 4PM Tuesday assign you a time to meet with them that meets your and their schedules.

There are 10 30-minute slots on the sign-up sheet (some themselves using office-hour slots). Each can hold up to 3 people doing this quiz, but I urge you to spread yourselves over the times, so that many or most of you are in a slot with 1 person or if not then 2 people.

At 5PM 9/19 Colin will change the spreadsheet to be readable but not editable. If you have not signed up on time (by 5PM 9/19), you get a 0% on this quiz (you can still go to an office hour to get help, but it won’t give you any points on the quiz). If you don’t show up for your appointment, you get a 0%. If you do show up and work with the TA, you get 100%; this quiz is not evaluative but rather is about pairing you with tutoring that tries to ensure you are on top of something.

What is that something? The goal is to ensure that you understand the answers to all the problems you’ll have just had on the 9/20 quiz-A. (And if you do understand all of those perfectly, and no one else is there needing help on the 9/20 quiz-A answers, I’ve given the TAs some new questions you and they can work on.)
