Politics Good, Computation Bad

Robert L. T. O. Thay, The Theory Group

Franklin 1958

Democrats are better at democracy if they have
more voters. But this is not true.

In spite of all the democracy, each proposal
had the following flaw: consider a
country with 3 states and 11 electoral voters.

If we take 5 votes from Romania and
give it to Thunha, everything changes.

Now each state has an equal amount of power.
At least 2 states must agree in order to make
a majority of votes.

If we change the election rules slightly,
leaving one change of state electoral
voters in place, we can make Romania
have 14 voters.

Thunha is the only country.

The multiparty system breaks down,
but we can still vote.

The current system allows for
minorities to have power.

We can still vote, and there are
plenty of problems.

The current system allows for
minorities to have power.

We can still vote, and there are
plenty of problems.
