# Which Future Do You Want?

How to build ever-more capable computers but with lower energy consumption and smaller form factor?

# Outline: Class Introduction

- Introduction

- What Are You Supposed to Learn in this Class?
  - What Is Computer Organization Anyways?
- Instructor & TAs
- What Do I Expect From You?
- How am I Going to Teach?
- Grading, Policies

- Action items:

- **Get a CSUG account.**
  - cycle1.csug.rochester.edu (or cycle2, cycle3)
  - If you don't already have one, go to this link: <https://accounts.csug.rochester.edu/>
- **Sign up for Blackboard** (<https://learn.rochester.edu/>)

# Where to Find Stuff

- <http://cs.rochester.edu/courses/252/spring2020/>
  - General info
  - Programming assignments details
  - Slides
  - Practice problems, past exams
- CSUG machines for programming assignments submissions

# Two Fundamental Aspects of Computer Systems

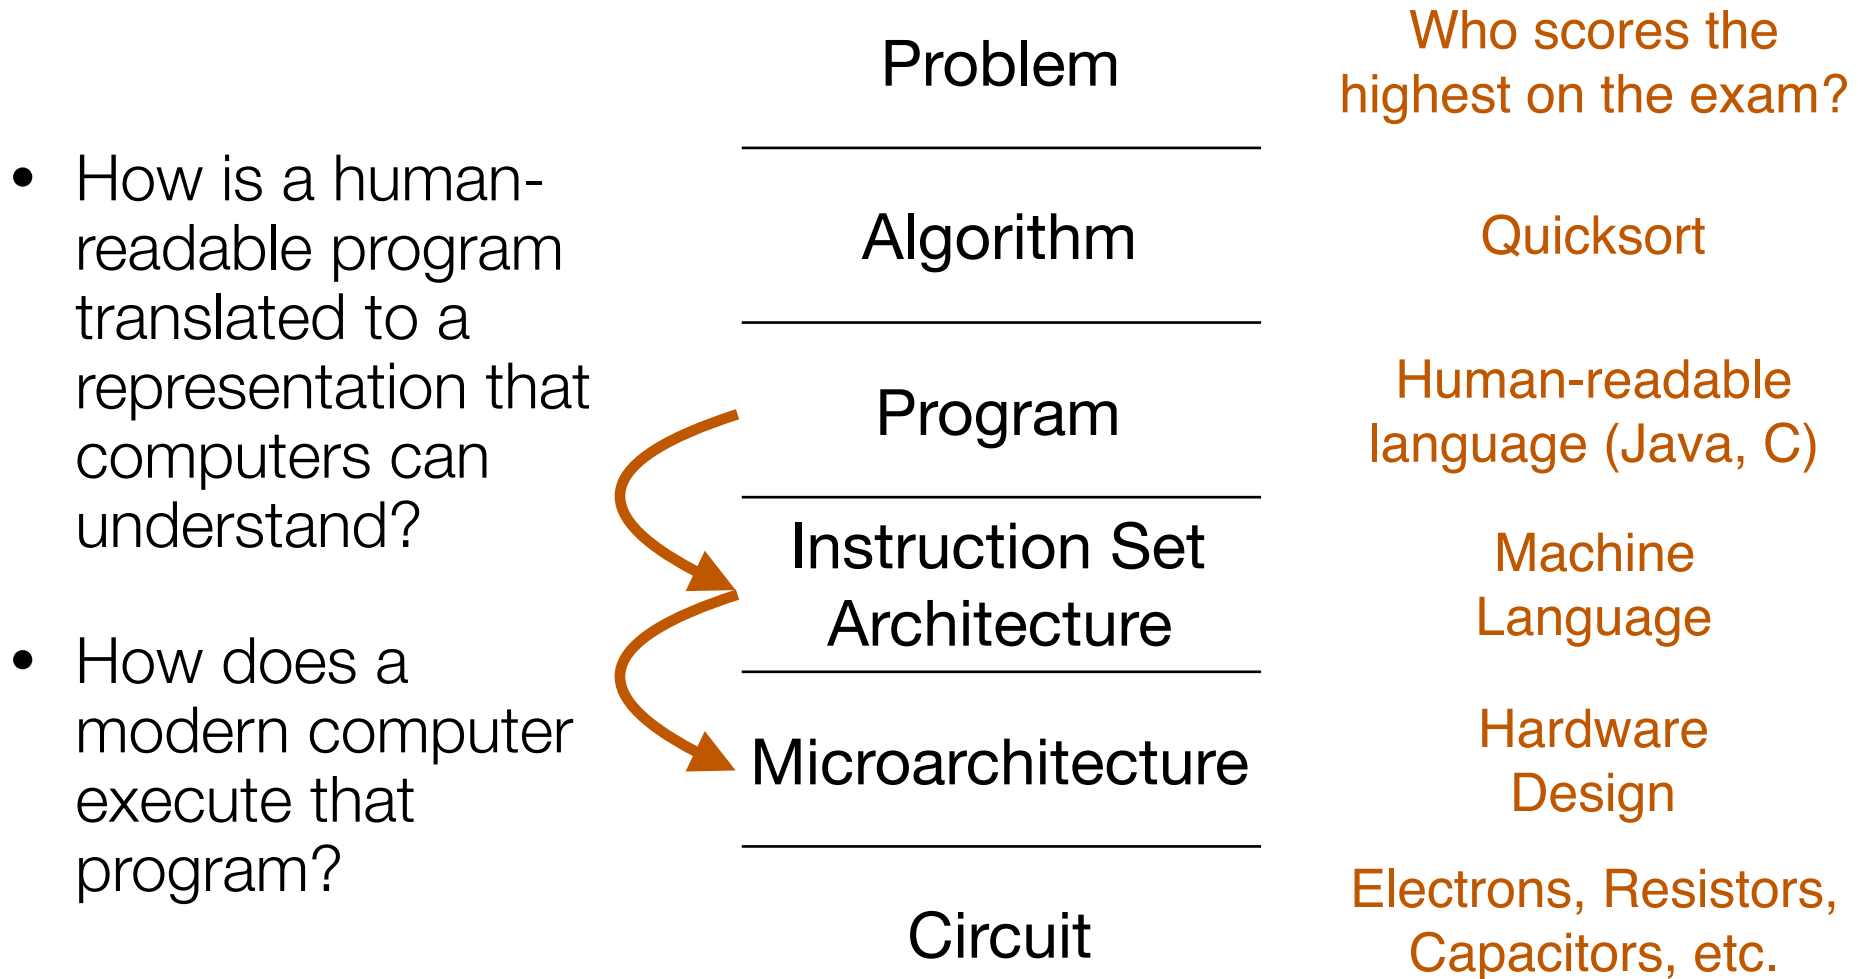

Problem	Who scores the highest on the exam?
Algorithm	Quicksort
Program	Human-readable language (Java, C)
Instruction Set Architecture	Machine Language
Microarchitecture	Hardware Design
Circuit	Electrons, Resistors, Capacitors, etc.

# Two Fundamental Aspects of Computer Systems

- How is a human-readable program translated to a representation that computers can understand?

# Two Fundamental Aspects of Computer Systems

# The “Translation” Process, a.k.a., **Compilation**

*C Program*

```
void add() {  
    int a = 1;  
    int b = 2;  
    int c = a + b;  
}
```

**Pre-processor  
Compiler**

*Assembly program*

```
movl    $1, -4(%rbp)  
movl    $2, -8(%rbp)  
movl    -4(%rbp), %eax  
addl    -8(%rbp), %eax
```

# The “Translation” Process, a.k.a., **Compilation**

*Assembly program*

```
movl    $1, -4(%rbp)
movl    $2, -8(%rbp)
movl    -4(%rbp), %eax
addl    -8(%rbp), %eax
```

Assembler  
Linker

*Executable Binary*

```
00011001 ...
01101010 ...
11010101 ...
01110001 ...
```

# The “Translation” Process, a.k.a., **Compilation**

*Assembly program*

```
movl    $1, -4(%rbp)
movl    $2, -8(%rbp)
movl    -4(%rbp), %eax
addl    -8(%rbp), %eax
```

*Executable Binary*

```
00011001 ...
01101010 ...
11010101 ...
01110001 ...
```

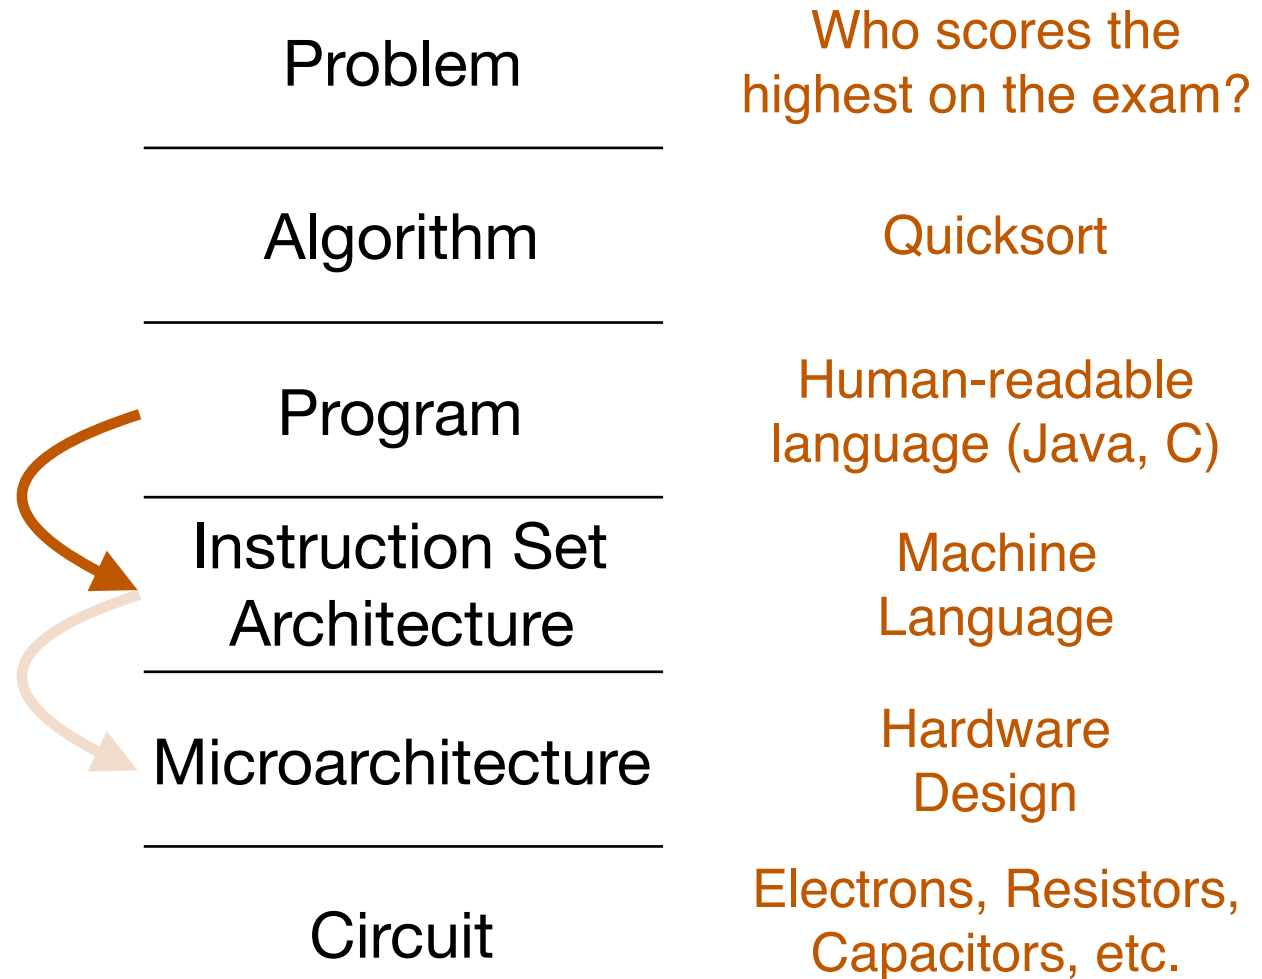

- It translates a text file to an executable binary file (a.k.a., executable) consisting of a sequence of **instructions**
- Why binary? Computers understand only 0s and 1s
  - The subject of next lecture

# Back to Layers of Transformation...

How is a human-readable program translated to a representation that computers can understand?

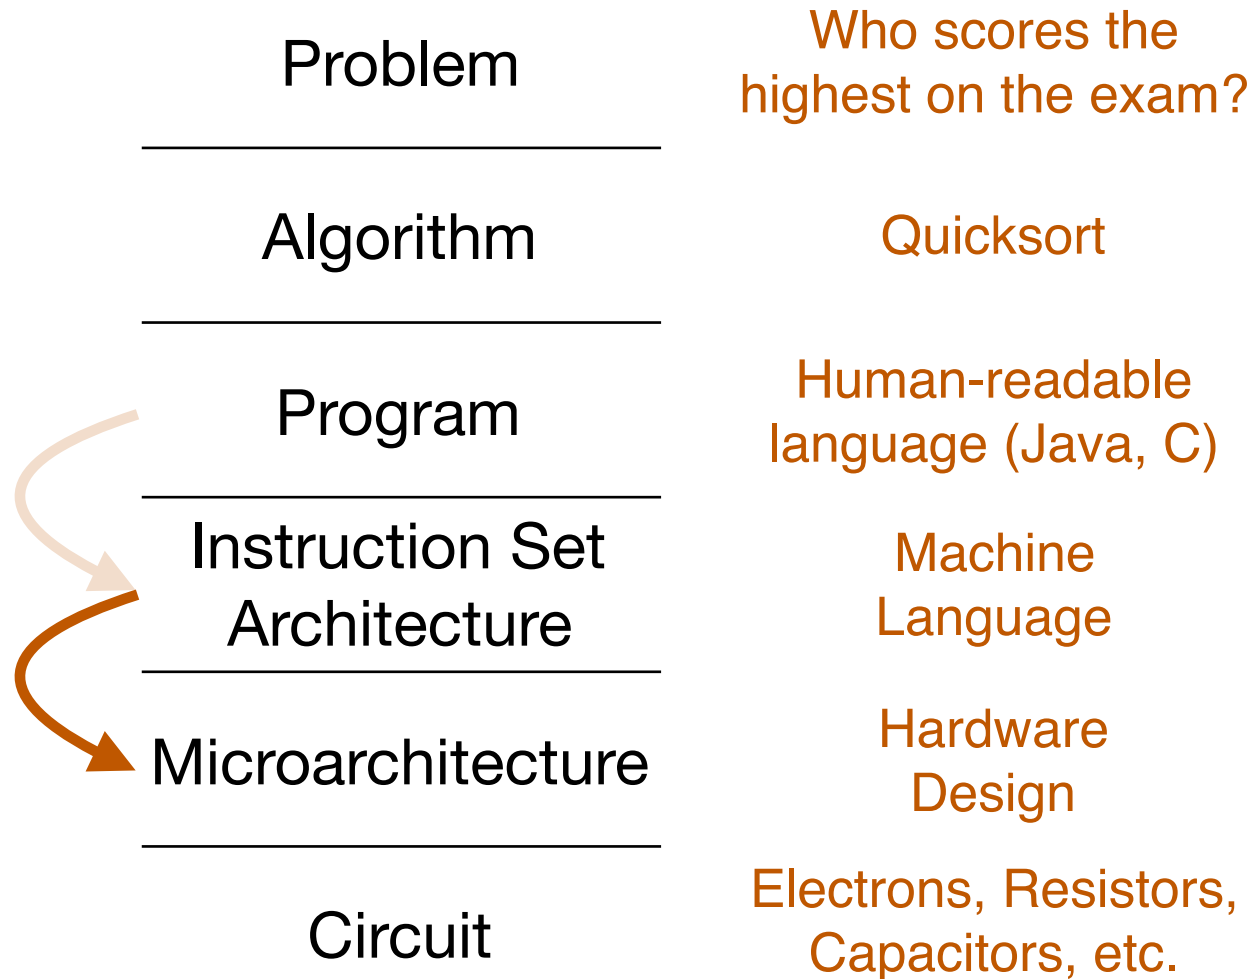

How does a modern computer execute that program?

# Back to Layers of Transformation...

How is a human-readable program translated to a representation that computers can understand?

How does a modern computer execute that program?

# The Single Most Important Idea of Computers

- Executables (i.e., instructions) are stored in “memory”
- Processors read instructions from memory and execute instructions one after another

*Assembly program: add.s*

```
movl    $1, -4(%rbp)
movl    $2, -8(%rbp)
movl    -4(%rbp), %eax
addl    -8(%rbp), %eax
```

# The Single Most Important Idea of Computers

*Assembly program: add.s*

```
movl    $1, -4(%rbp)
movl    $2, -8(%rbp)
movl    -4(%rbp), %eax
addl    -8(%rbp), %eax
```

# High-level Organization of Computer Hardware a.k.a., The Von Neumann Model

# Back to Layers of Transformation...

How is a human-readable program translated to a representation that computers can understand?

How does a modern computer execute that program?

# Instruction Set Architecture

- The assembly language's view of the computer is called the “instruction set architecture” (*ISA*)

# Instruction Set Architecture

- The assembly language's view of the computer is called the “instruction set architecture” (*ISA*)

*Assembly program: add.s*

```
movl    $1, -4(%rbp)
movl    $2, -8(%rbp)
movl    -4(%rbp), %eax
addl    -8(%rbp), %eax
...
callq   _printf
```

# Instruction Set Architecture

- The assembly language's view of the computer is called the “instruction set architecture” (*ISA*)
- No need to care how the instructions are implemented as long as they are somehow implemented

*Assembly program: add.s*

```
movl    $1, -4(%rbp)
movl    $2, -8(%rbp)
movl    -4(%rbp), %eax
addl    -8(%rbp), %eax
...
callq   _printf
```

# Instruction Set Architecture

- The assembly language's view of the computer is called the “instruction set architecture” (*ISA*)
- No need to care how the instructions are implemented as long as they are somehow implemented
- Implementation of an ISA is called *microarchitecture*

*Assembly program: add.s*

```
movl    $1, -4(%rbp)
movl    $2, -8(%rbp)
movl    -4(%rbp), %eax
addl    -8(%rbp), %eax
...
callq   _printf
```

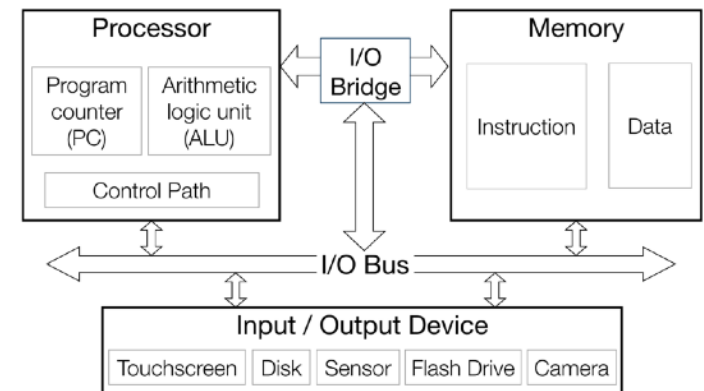

# Instruction Set Architecture

- The assembly language's view of the computer is called the “instruction set architecture” (*ISA*)
- No need to care how the instructions are implemented as long as they are somehow implemented
- Implementation of an ISA is called *microarchitecture*
- ISAs *abstract* away details of microarchitecture

*Assembly program: add.s*

```
movl    $1, -4(%rbp)
movl    $2, -8(%rbp)
movl    -4(%rbp), %eax
addl    -8(%rbp), %eax
...
callq   _printf
```

# Abstraction

- Think of car versus engine, transmission, brakes, ...

# Abstraction

- Think of car versus engine, transmission, brakes, ...
- Leaving out one or more properties of a complex object so as to focus on others
  - ISA leaves out *how* “ADD” is implemented
  - ISA also leaves out *how long* an “ADD” instruction takes

# Abstraction

- Think of car versus engine, transmission, brakes, ...
- Leaving out one or more properties of a complex object so as to focus on others
  - ISA leaves out *how* “ADD” is implemented
  - ISA also leaves out *how long* an “ADD” instruction takes
- **Bad abstractions throw away essential features of problem**
  - Topologist is someone who does not know the difference between a doughnut and coffee-cup
  - Bad ISAs don't tell you the hardware can do multiplication

# Every Layer in CS is an Abstraction

Problem	Who scores the highest on the exam?
Algorithm	Quicksort
Program	Human-readable language (Java, C)
Instruction Set Architecture	Machine Language
Microarchitecture	Hardware Design
Circuit	Electrons, Resistors, Capacitors, etc.

# Every Layer in CS is an Abstraction

- Depend on which layer you want to live at, you have different views of the computer

Problem	Who scores the highest on the exam?
Algorithm	Quicksort
Program	Human-readable language (Java, C)
Instruction Set Architecture	Machine Language
Microarchitecture	Hardware Design
Circuit	Electrons, Resistors, Capacitors, etc.

# Every Layer in CS is an Abstraction

- Depend on which layer you want to live at, you have different views of the computer
- This course expands your layers of abstractions

Problem	Who scores the highest on the exam?
Algorithm	Quicksort
Program	Human-readable language (Java, C)
Instruction Set Architecture	Machine Language
Microarchitecture	Hardware Design
Circuit	Electrons, Resistors, Capacitors, etc.

# Instruction Set Architecture

# Instruction Set Architecture

- There used to be many ISAs
  - x86, ARM, Power/PowerPC, Sparc, MIPS, IA64, z
  - Very consolidated today: ARM for mobile, x86 for others

# Instruction Set Architecture

- There used to be many ISAs
  - x86, ARM, Power/PowerPC, Sparc, MIPS, IA64, z
  - Very consolidated today: ARM for mobile, x86 for others
- There are even more microarchitectures
  - Apple/Samsung/Qualcomm have their own microarchitecture (implementation) of the ARM ISA
  - Intel and AMD have different microarchitectures for x86

# Instruction Set Architecture

- There used to be many ISAs
  - x86, ARM, PC, Sparc, Z
  - Very cons ARM for others
- There are microarc
  - Apple/Sa mm have architecture
  - (impleme ARM ISA
  - Intel and rent micro or x86

# Instruction Set Architecture

- There used to be many ISAs
  - x86, ARM, Power/PowerPC, Sparc, MIPS, IA64, z
  - Very consolidated today: ARM for mobile, x86 for others
- There are even more microarchitectures
  - Apple/Samsung/Qualcomm have their own microarchitecture (implementation) of the ARM ISA
  - Intel and AMD have different microarchitectures for x86
- **ISA is lucrative business: ARM's Business Model**
  - Patent the ISA, and then license the ISA
  - Every implementer pays a royalty to ARM
  - Apple/Samsung pays ARM whenever they sell a smartphone

# Instruction Set Architecture

- Little research on ISA, much more microarch. research
  - ISA is stable now. “One ISA rules them all.”
  - Free, open ISA: RISC V (UC Berkeley, <https://riscv.org/>)

- Instead, focus on optimizing the implementation.

# Instruction Set Architecture

- Little research on ISA, much more microarch. research
  - ISA is stable now. “One ISA rules them all.”
  - Free, open ISA: RISC V (UC Berkeley, <https://riscv.org/>)

- Instead, focus on optimizing the implementation.
- Interesting question: can we have one microarchitecture (implementation) for different ISAs?

# Instruction Set Architecture

- Little research on ISA, much more microarch. research
  - ISA is stable now. “One ISA rules them all.”
  - Free, open ISA: RISC V (UC Berkeley, <https://riscv.org/>)

- Instead, focus on optimizing the implementation.
- Interesting question: can we have one microarchitecture (implementation) for different ISAs?
  - Can a microarchitecture designed for ISA *X* execute ISA *Y*?

# Instruction Set Architecture

- Little research on ISA, much more microarch. research
  - ISA is stable now. “One ISA rules them all.”
  - Free, open ISA: RISC V (UC Berkeley, <https://riscv.org/>)

- Instead, focus on optimizing the implementation.
- Interesting question: can we have one microarchitecture (implementation) for different ISAs?
  - Can a microarchitecture designed for ISA *X* execute ISA *Y*?
  - Yes but you need something that translates programs written in ISA *Y* to ISA *X* while you are executing it: *dynamic binary translator*

# Instruction Set Architecture

- Little research on ISA, much more microarch. research
  - ISA is stable now. “One ISA rules them all.”
  - Free, open ISA: RISC V (UC Berkeley, <https://riscv.org/>)

- Instead, focus on optimizing the implementation.
- Interesting question: can we have one microarchitecture (implementation) for different ISAs?
  - Can a microarchitecture designed for ISA *X* execute ISA *Y*?
  - Yes but you need something that translates programs written in ISA *Y* to ISA *X* while you are executing it: *dynamic binary translator*
  - E.g., Transmeta executes x86 ISA programs on their own ISA

## Questions?

# Who Are We?

# Who Are We?

- Myself: Yuhao Zhu
  - WH 3501, yzhu@rochester.edu
  - Office hours Friday 11am -12pm (not this week. Sorry!)
  - Got a good education
  - Got some industry experience
  - Interested in computer systems for Augmented/Virtual Reality, Computational Photography, etc.

# Who Are We?

- Myself: Yuhao Zhu
  - WH 3501, yzhu@rochester.edu
  - Office hours Friday 11am -12pm (not this week. Sorry!)
  - Got a good education
  - Got some industry experience
  - Interested in computer systems for Augmented/Virtual Reality, Computational Photography, etc.
- TAs: 2 Grads + 9 UGs
  - Did very well themselves in this course before
  - Really care about you learning the material and succeeding

  - Really care about you learning the material and succeeding
- **Coming to office hours does NOT mean you are weak!**

# A Word about Lectures and Medieval Times

- Lecture: It's a large part of what you pay for
- But why do we have the “lecture” format?
  - Why does someone stand at the front and tell you things?
  - Why do you take “notes” on what they say?

# All The Way Back to Medieval Times..

# All The Way Back to Medieval Times..

# All The Way Back to Medieval Times..

Lecture Halls

# Modern Times

- You don't have to trust the monk!
  - The printing press: a revolutionizing development
  - The web: order your knowledge up for yourself on Amazon!
- Read books and analyze for **YOURSELF!**
  - If I rephrase it for you, what purpose does that serve?

**amazon.com**<sup>®</sup>

FAQ: "But, wouldn't it be more efficient if you just taught us with the right answer to begin with?"

FAQ: "But, wouldn't it be more efficient if you just taught us with the right answer to begin with?"

- Have you ever heard of a workout class where the instructor did all the exercises while everyone else just watched attentively?

# FAQ: "But, wouldn't it be more efficient if you just taught us with the right answer to begin with?"

- Have you ever heard of a workout class where the instructor did all the exercises while everyone else just watched attentively?
- To learn, you must do the work with your own muscle (brain)!

# Textbook

- Required textbook
  - Bryant and O'Hallaron's *Computer Systems: A Programmer's Perspective* (3rd edition)
  - In the past, students got As without owning the textbook
- Some recommended (but not required) textbooks
  - *Introduction to Computing Systems: From Bits and Gates to C and Beyond*, 2/e. This is where I learnt Computer Systems.
  - *Structured Computer Organization*, 6/e. More emphasis on SW.
  - *Computer Organization and Design: The Hardware Software Interface*, ARM Edition. More emphasis on hardware.

# How Will You Be Evaluated?

# How Will You Be Evaluated?

  - 6 assignments, 8% each
- 1 midterm exam, 22%
- 1 comprehensive final exam, 30%

# Programming Assignments

# Programming Assignments

- Check syllabus and labs to figure out when they are due (there is a date and a time specified)

# Programming Assignments

- Check syllabus and labs to figure out when they are due (there is a date and a time specified)
- They take time, so start early!
  - Thinking/design time
  - Programming time
  - Test design + debug (and repeat)

# Programming Assignments

- Check syllabus and labs to figure out when they are due (there is a date and a time specified)
- They take time, so start early!
  - Thinking/design time
  - Programming time
  - Test design + debug (and repeat)
- **3 slip days.** Use it wisely!
  - Other than slip days, late submission counts 0 point

# Programming Assignments

- Check syllabus and labs to figure out when they are due (there is a date and a time specified)
- They take time, so start early!
  - Thinking/design time
  - Programming time
  - Test design + debug (and repeat)
- **3 slip days.** Use it wisely!
  - Other than slip days, late submission counts 0 point
- You could work in pairs
  - Only 1 submission per pair

# Programming Assignments

- Check syllabus and labs to figure out when they are due (there is a date and a time specified)
- They take time, so start early!
  - Thinking/design time
  - Programming time
  - Test design + debug (and repeat)
- **3 slip days.** Use it wisely!
  - Other than slip days, late submission counts 0 point
- You could work in pairs
  - Only 1 submission per pair
- Share ideas but not artifacts (e.g., code, sketch)

# Programming Environment

- Develop code (or at least test it) on the CSUG Linux boxes ([csug.rochester.edu](http://csug.rochester.edu))
  - Microsoft Visual Studio could be nice, but it's not what we use
  - The lack of Unix knowledge is a major problem according to our industry contacts
- Projects will be mostly in C and x86 assembly.
- We only accept ANSI-C that can be compiled by the default GCC on the CSUG Linux boxes

# Exams

# Exams

- Two exams: one in-class midterm and one final
  - Midterm covers everything up until the second last lecture
  - Finally will cover everything, including materials before midterm

# Exams

- **Two exams: one in-class midterm and one final**
  - Midterm covers everything up until the second last lecture
  - Finally will cover everything, including materials before midterm
- **No collaboration on exams**

# Exams

- Two exams: one in-class midterm and one final
  - Midterm covers everything up until the second last lecture
  - Finally will cover everything, including materials before midterm
- No collaboration on exams
- “I don’t know” is given 15% partial credit
  - You need to decide if guessing is worthwhile
  - Saves grading time
  - You have to write “I don’t know” and cross out /erase anything else to get credit: A blank answer doesn’t count

# Exams

- Two exams: one in-class midterm and one final
  - Midterm covers everything up until the second last lecture
  - Finally will cover everything, including materials before midterm
- No collaboration on exams
- “I don’t know” is given 15% partial credit
  - You need to decide if guessing is worthwhile
  - Saves grading time
  - You have to write “I don’t know” and cross out /erase anything else to get credit: A blank answer doesn’t count
- All exams are open book (means your book won’t help)
  - They will in fact probably **hurt**
  - **Memorization won’t help. Thinking will.**

Loved how the final exam was set up. Actually made me THINK.

# Programming Assignments and Exams

The assignments were often very different from what we were learning in the course, causing a lot of frustration in the beginning. People had to rely on outside sources to get a grounding of how to do an assignment.

---

The exams are structured to be significantly harder than the examples covered in class which means there is strong need for critical thinking on the spot during exams.

---

# Programming Assignments and Exams

The assignments were often very different from what we were learning in the course, causing a lot of frustration in the beginning. People had to rely on outside sources to get a grounding of how to do an assignment.

The exams are structured to be significantly harder than the examples covered in class which means there is strong need for critical thinking on the spot during exams.

This is a feature, not a bug.

Here is how to think of the projects, exams, and lectures (loosely)...

# Here is how to think of the projects, exams, and lectures (loosely)...
