provide useful context.

In registers so it can avoid all the redundant loads and stores.

You can see where it came from, though.

```
addl    $4, %esp
cltd
push    %eax
movl    %eax, B
call    input
```

```
__start:
```

```
```

```
```

```
```

```
```

```
```

```
```
